Continuous Control of the Composition of Blast Furnace Gas Byul. tekhn.-ekon. inform. Sovnarkhoz Stalinskogo ekon. adm.

PERIODICAL:

r-na, 1958, Nr 6, pp 42 - 44 Information is given on the design and operation of an optic-

ABSTRACT:

acoustical gas analyzer for determining the CO₂ and CO content in gas, as well as of an electric gas analyzer for H₂ determining the CO₃ and CO content in gas, as well as of an electric gas analyzer for H₂ determining the CO₃ and CO content in gas, as well as of an electric gas analyzer for H₂ determining the CO₃ and CO content in gas, as well as of an electric gas analyzer for H₂ determining the CO₃ and CO content in gas, as well as of an electric gas analyzer for H₂ determining the CO₃ and CO content in gas, as well as of an electric gas analyzer for H₂ determining the CO₃ and CO content in gas, as well as of an electric gas analyzer for H₂ determining the CO₃ and CO content in gas, as well as of an electric gas analyzer for H₂ determining the CO₃ and CO content in gas, as well as of an electric gas analyzer for H₂ determining the CO₃ and CO content in gas, as well as of an electric gas analyzer for H₂ determining the CO₃ and CO content in gas, as well as of an electric gas analyzer for H₃ determining the CO₃ and CO content in gas, as well as of an electric gas analyzer for H₃ determining the CO₃ and CO content in gas analyzer for H₃ determining the CO₃ and CO content in gas analyzer for H₃ determining the CO₃ and CO content in gas analyzer for H₃ determining the CO₃ and CO content in gas analyzer for H₃ determining the CO₃ and CO content in gas analyzer for H₃ determining the CO₃ and CO content in gas analyzer for H₃ determining the CO₃ and CO content in gas analyzer for H₃ determining the CO₃ and CO content in gas analyzer for H₃ determining the CO₃ and CO content in gas analyzer for H₃ determining the CO₃ and CO content in gas analyzer for H₃ determining the CO₃ and CO content in gas analyzer for the CO₃ and CO content in gas analyzer for the CO₃ and CO content in gas analyzer for the CO₃ and CO content in gas analyzer for the CO₃ and CO content in gas analyzer for the CO₃ and CO content in gas analyzer for mination. The operational principle of the first device is based on the ability of CO₂ and CO to absorb infrared rays proportional to their concentration and to the vibration of gas under the continuous effect of an infrared radiation flow. Tests carried out at blast furnace shop of the "Azovstal" Plant yielded satisfactory results: the magnitude of error of the measurements did

not exceed ± 5%.

Card 1/2

AUTHORS: Pliskanovskiy, S.T. and Temnokhud, N.N.

TITLE: Continuous Measurement of the Composition of Blast-

Furnace Top Gas (Nepreryvnyy kontrol' sostava

koloshnikovogo gaza na domennykh pechakh).

PERIODICAL: Metallurg, 1958, Nr.10, pp.7-9 (USSR)

The continuous analysis of blast-furnace top gas is ABSTRACT:

important for furnace operation. At the "Azovstali" works experiments have been carried out with an infrared analyser for carbon monoxide and carbon dioxide, and a thermal conductivity meter for hydrogen.

from the tangential gas cleaner is taken through a

coarse filler filled with 15-25 mm coke, goes via a hose to a further filter-condenser containing bog ore, thence to two calcium-chloride filter-driers in parallel and

through a membrane pressure regulator to a flowmeter, followed, in series, by the CO, CO2 and H2 analysers and a waste gas pipe (Fig.1). The construction of the

Card 1/3 CO and CO2 meters is identical. Each consists (Fig.2)

SOV/130-58-10-3/18 Continuous Measurement of the Composition of Blast-Furnace Top Gas.

of two sources of infra-red radiation which follow parallel paths to a detector (filled with the pure gas being analysed for). One of the beams on its way passes through a cell filled with air, the other through one filled with the analysed mixture. Both beams pass through cells filled with CO for the CO_2 analyser and CO_2 for the CO analyser: these cells serve to eliminate the influence of the other component in each case (Fig. 2). The signal from the detector, which is a measure of the difference in infra-red energy of the appropriate wavelength absorbed in the two beams is a measure of the concentration of the appropriate component in the gas mixture: it is amplified and recorded. The ranges of the infra-red instruments are 7-15% CO2 and 25-35% CO. The hydrogen analyser is of the balanced-bridge thermal conductivity type (Fig. 3). It follows the infra-red meters in the gas train and has a range of 0-5% H. The errors of all the instruments are well within (Table) the 45% specified. This article is "Byulleten' tekhnikoekonomicheskoy informatsii", 1958, Nr.6, of the SNKh-

Kozhukh, V. Ya., Tennokhud, N. N., Onishchenko, N. G. 25(6) AUTHORS:

An Attempt to Make Use of Optico-Acoustical Gas Analyzers TITLE:

(Opyt ekspluatatsii optiko-akusticheskikh gazoanalizatorov)

Zavodskaya Laboratoriya, 1959, Vol 25, Nr 2, PERIODICAL:

pp 215 - 218 (USSR)

In the "Azovstal'" plant a pilot unit for the continuous determination of the CO, CO2, and H2 contents of blast furnace ABSTRACT:

gas has been erected. The unit consists of optico-acoustical

gas analyzers, filters intended to remove dust and "aggressive" impurities, as well as flow regulators for the supply of the solutions to the filters and for the gas filtration proper. Both the unit and the underlying principle have already been described (Ref 1). It was found that some of the nuxiliary arrangements are not necessary for work in connection with blast furnaces. The modification of the unit (Fig 1) is now being used with all the furnaces in the plant. It has the

following measuring ranges: 0-35% for CO, 0-15% for CO2, and

0-10% for H2. In order to increase the accuracy of measurements

Card 1/3

An Attempt to Make Use of Optico-Acoustical Gas Analyzers SOV/32-25-2-42/78

the CO, CO₂, and H₂ scales were modified by the L'vovskiy politekhnicheskiy institut (L'vov Polytechnic Institute) (CO 25-35%, CO₂ 7-15%, H₂ 0-5%), and the potentiometer wiring (Fig 2) as well as the resistance of the rheochord of the unit (Fig 3) were changed accordingly. The operation of the gas analyzers and the reproducibility of the results (Table 2) were checked by means of check mixtures (Table 1). In 1957 optico-accoustical industrial gas analyzers of the types OA 2104 (for CO), OA 2204 (for CO₂), and TP-1110 (for H₂)

were introduced for use with all blast furnaces of the "Azovstal" plant. The types mentioned above differ from the experimental models by the method of measurement of the amount of gas supplied. The apparatuses are described in references. The results of the testing of gas analyzers are given (Table 3). Moreover the relative advantages and drawbacks of the latter apparatuses and those mentioned above are pointed out. It is also stated that it will be necessary to set up expert teams for the assembly and erection of analytical apparatuses for metallurgical works. These should be formed in the works by KIP and the avtomatika (Auto-

Card 2/3

First Results of the Experimental Operation of a System of Devices TITLE:

for the Automatic Control of Heat Conditions in a Blast Furnace

Tr. Donetsk, industr. in-ta, 1959, Vol. 40, pp. 19 - 32 PERIODICAL:

In accordance with formulae of heat control submitted, the calculation of basic parameters of blast furnace smelting process depends on 39 variables, some of which are varying slowly with time and the rest are varying continuously. The calculation of blast furnace melting parameters by these formulae, is carried out with the use of computing devices designed by the L'vov Polytechnic Institute. The parameters varying slowly with time, are supplied to the computer with the aid of a manual apparatus handle; the continuously varying parameters are introduced automatically. To obtain continuously the values of these parameters, measuring devices are mounted which are equipped with additional indicators for the trans-

formation of the indices into electric pulses and for the continuous introduction of the variables to the computer. The authors discuss the results of automatic control device and computer operation on blast furnace No. 2 of the "Azovstal' " Plant, which show that the computers make possible the continuous determination of heat conditions of the furnace and the use of these data to regulate the process.

Principles of computer design (Osnovy rascheta i proyektirovaniya schetno-reshayushchikh ustroystv) Moscow, Izd-vo "Vysshaya shkola", 1965. 459 p. illus., biblio. Textbook for students of technical higher educational institutions. 10,000 copies printed.

TOPIC TAGS: computer design, computer component, pulse counter

PURPOSE AND COVERAGE: This textbook has been approved by the Ministry of Higher and Secondary Special Education USSR and is intended for students in advanced instrument-building courses in schools of higher education. It may also be useful to designers, engineers, and technicians concerned with calculation and design of computers and mathematical machines. The author's intention was to create a practical manual on the calculation and design of computers and calculators containing typical examples of calculations as well as recommendations on the selection of elements and the construction of designed circuits, taking their operating conditions, production, and technology into consideration. Ch.I and III were written by L. N. Presnukhin, Ch.II by I. V. Temnov, Ch.IV. by Yu. M. Smirnov, and Ch.V. by L. A. Solomonov

Temnov, V.A., Candidate of Agricultural Sciences (Moscow)

TITLE:

The Cure of Bee Stings (O lechenii pchelinykh uzhaleniy)

PERIODICAL:

Priroda, 1958, Nr 7, pp 117-118 (USSR)

ABSTRACT:

The author gives a brief survey on the present state of research on the effects of bee stings on the human body. The survey is based on an article published by F. Krzeminski (F. Ksheminskiy) in a Polish bee-keeping journal. Among bee keepers, only 4.2% were immune to bee poison. This may be innate or acquired as a result of bodily exhaustion from tuberculosis, diabetes, kidney and heart diseases, troubles of the blood circulation system, etc. Innate resistance against bee poison may have been acquired when the mother had been stung during the pregnancy period. The average doctor or hospital has no special drugs against serious cases of poisoning from bee stings, except the well-known household remedies. For light poisoning cases Krzeminski recommends the application of heart drugs and drinking of large amounts of milk, fresh or sour; in case of a resulting nettle rash the application of salicyclic acid over large areas of the body, cold compresses and subcutaneous doses

Card 1/2

The Cure of Bee Stings

of calcium preparations and, in order to construct the block vessels and increase the blood pressure, subcutaneous adrenaline doses; in serious cases, the application of anti-histamines.

There is 1 Polish and 1 Canadian reference.

Translation from: Referativnyy zhurnal. Mekhanika, 1957, Nr 5, p 60 (USSR)

AUTHOR: Temnov, V. K.

TITLE: The Hydraulic Friction in Short Penstocks Wherein the Hydraulic

Resistance Varies in Accordance With a Square Law (Gidravlicheskoye treniye v korotkikh napornykh vodovodakh pri kvadratichnom

zakone soprotivleniya)

PERIODICAL: Tr. Mosk. energ. in-ta, 1956, Nr 19, pp 135-149

ABSTRACT: In order to evolve formulae with which to calculate the hydraulicresistance coefficient along the length of a short conduit charac-

terized by inner-surface roughness and in which the hydraulic resistance varies according to a square law, the author has recourse to three devices: 1) the so-called Kármán relationship between the momentum variation in the turbulent boundary layer and the forces of

momentum variation in the turbulent boundary layer and the forces of the pressure and of the turbulent friction; 2) the assumption that the velocity distribution in the boundary layer obeys a logarithmic law; and 3) an equation for the variation in the flow velocity of the core of

the flow. Solving the resulting closed system of equations yields a

Card 1/2 differential equation which, in turn, yields a value for the

SOV/124-57-5-5535

The Hydraulic Friction in Short Penstocks Wherein the Hydraulic Resistance (cont.)

boundary-layer thickness. In the solving of this latter equation the author's use of approximate methods of graphic and numerical integration enables him to determine the mean value of the friction coefficient along the length of the conduit. The approximate character of the boundary-layer theory on which the evolved theoretical relationships are based and the number of arbitrarily adopted assumptions involved have tended to make the resulting formulae approximate also; they require to be verified experimentally. deal with various problems in the design and construction of subassemblies and mechanisms of internal combustion engines, automotive transmissions, hydraulic and other machines. No personalities are mentioned. References accompany each article.

TABLE OF CONTENTS:

Foreword

3

Rumyantsev, S.A., Engineer. Problem of Increasing the Life of Splines
Investigations aimed at improving the wear resistance of splines with length/diameter ratio of 0.5 are described. It is shown that by means of nitriding and cyaniding and increasing the life of splines by 2.6-3 times, their wear amounts to only 0.04-0.05 mm and they are suitable for further use.

TITLE: Hydraulic resistance factor of an easy entrance with a turbulent liquid

SOURCE: IVUZ. Energetika, 6. 4, 1963, 89-93

TOPIC TAGS: hydraulic resistance factor, turbulent liquid flow

ABSTRACT: It is usually assumed that the entrance resistance factor depends on the entrance shape only. However, in case of a very easy entrance the resistance factor will depend on the roughness of walls and the mode of flow. The article presents an approximate method for calculating the resistance factor of a very easy entrance into a round rough-wall pipe when the liquid flow is turbulent. Engineering formulas are supplied, and the theoretical results are compared with the experimental data taken from literature. Orig. art. has: 4 figures and 45 formulas.

TITLE: Results of a study on working conditions of operators

SOURCE: Sistema chelovek i avtomat (Man-automaton systems). Moscow, Izd-vo Nauka, 1965, 197-214

TOPIC TAGS: information theory, man machine control system, information processing

ABSTRACT: Experiments are set up to explain the basic factors which affect the duration of time lost by operators in performing their tasks | An experimental apparatus, OPERATOR, was constructed for this study. The results of this experiment show that information | reception increases in proportion to the number of light signals. An expression is given for this relationship

 $\tau_{rec} = bH + a$

Information reception time is not determined by input information presented by the appara-

0

L 36335-66

ACC NR: AT6012898

tus but by output information. With a greater quantity of information than I=4.16 binary units, the throughput capacity of the operator falls to C=5 binary units per second. It was shown that the throughput capacity of the subject approaches 5 binary units per second with an increase in the information stream for the given experiment as well as for the experiments with damped units. A study of communication and command efficiency under marine conditions shows that redundance is greater for special technical language than for standard language (94% as compared to 60%). Orig. art. has: 13 figures and 27 formulas.

TITLE:

Eccene Deposits in the Gorgan Folds of the Carpathians PERIODICAL: Dopovidi Akademii Nauk Ukrains'koi RSR, 1959, Nr 6,

pp 656 - 658 (USSR)

ABSTRACT: By this article the author makes his contribution to the

still unsettled dispute over the origin of some deposits in the Gorgan folds of the Carpathians. Fleetingly mentioning some authors named in the reference block and geologists B. P. Weeds day and S. I. Shevir'yov, the author states that some of them regarded the origin of the above-mentioned

deposits as being of the Oligocene epoch, whereas others believed them to be of Paleocene era. In the author's opinion both beliefs are wrong, and those deposits actually are of Eocene origin. The correctness of his statement,

the author fortifies by the opinion of L. A. Artsabka who examined them in 1958, and by the finds of an MGRI expedition.

The author also challenges the (in his opinion) preconceived Card 1/2

opinion that the Eccene deposits of the Carpathians, in all

Eccene Deposits in the Gorgan Folds of the Carpathians SOV/21. 59-6-19/27

tectonic zones, should be of a green color, and cites a number of instances when the examined deposits were of a black color. In his opinion, the complex of Eccene deposits in the Gorgan folds has an acute facial difference from the Eocene rocks of the Skib zone. In appearance they are similar to the menilitic suite. The rocks of the Golyatin suite, studied by the author with particular attention, are of Lower Eccene age, contain a flint horizon in their foot and have much common with the menelitic deposits in respect There are 8 Soviet references.

"Equipment for Determining the Dynamic Characteristics of Regulators", Avtomatika i Telemekhanika, Vol 14, No 1, 1953, pp 51-55.

Describes equipment for the experimental determination of the dynamic characteristic of a regulator. The amplitude-phase characteristic is obtained by means of a comparison of simultaneously recorded imput and output oscillations. The input simusoidal undamped oscillations with a constant amplitude may be artificially excited with frequencies, characteristic for slow-moving processes. A com, rotated by a hydraulic motor, serves as an exciter. A description of the hydraulic motor and the device for changing the amplitude of input oscillations is given. For recording the oscillations transducers and a multiloop oscillograph are used. The obtained curves are expanded into Fourier series. An example of testing the automatic regulator of hydraulic type with a jet pipe is given. (RZhMekh, No 11, 1954) SO: Sum. No. 443, 5 Apr. 55
